

Baking Soda ♦ Wet/Dry ♦ Blaster

EZ-Blust™

Powered By Magic Powder.

IT'S EZ!

EZ Blust

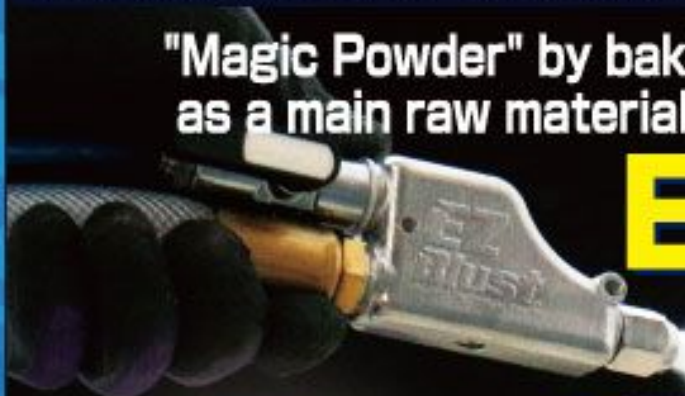

www.ezblust.com

EZ Blust is a powerful cleaning tool that sprays baking soda media known as magic powder onto the object together with compressed air and water. This makes the effect and work possible like between the high pressure washer and sandblasting.

"Magic Powder" by baking soda
as a main raw material

Innovative EZ Blust

—ENVIRONMENTALLY FRIENDLY, CLEAN WITH NO-DAMAGE—

**EZ WET Starter Set
Available**

before

after

A new tool has been launched!
Highly recommended for professionals,
semi-works teams and privateers.

"EZ Blust" is a completely new blasting system that enables to switch between dry and wet, with using the magic powder as the media. This system makes mild finishes possible which can not be done with high-pressure washing machines or sand blasters.

特徴 1 Baking soda media is environmentally friendly.

Baking soda media after use has no environmental impact even if it disposes into sewage as it is. It is possible to work directly near gratings as there is no need to recover the media. Also, it is applicable for materials that touch the skin as less impact on the human body.

Merit: No need to recover the media

*For the condition of mixing with heavy oil stains or paint film, please go through a separation tank or grease trap.

特徴 2 Baking soda dissolves in water.

Since the previous blast media was not water soluble, it was not suitable for objects which are not good with even a small amount of residue after work. For example, undercarriages and overhauls of the internal combustion engine which contain ball joints and bearings took a lot of time to prepare for work (removing and curing) as well as removing the media.

Water-soluble baking soda media is easy to wash away with water. Also, as it is low Mohs hardness, it minimizes damage to the object even remains some residue.

*We recommend to wash away with hot water to ensure there is no remaining residue on the object for precision parts such as carburetors. It instantly dissolves in water if the water temperature exceeds 60 °C / 140 °F.

*Ph value may get affected by the flow rate. Also, please be aware that it may effect animals and plants depending on the working environment such as small ponds and flower beds.

特徴 3 Mohs hardness of baking soda media is 2.5 (same hardness as nails)

In the case of using the method of rubbing and/or polishing, it is difficult to clean the places where tools and fingers can barely enter. This spraying method works better in such places. There is no need to worry about getting a scratch as it does not rub.

Baking soda foams carbon dioxide in the process of dissolution. Effectively this helps stains float up and makes the cleaning effect increase.

*There are some different effects depending on materials. Surface of metal plating such as chrome, unichrome, and nickel can be cleaned only with dirt, stains, and rust. Aluminum, brass and copper may be damaged. Stainless steel does not become foggy even with a polish, and it becomes semi-gloss.

*The effect of the paint film varies depending on the type of paint. If coating film is thin or low hardness, it peels off instantly. Two-component polyurethane paint on the car body can be also peeled off. For a thick film coating and high hardness powder coating, it is possible to remove only dirt/ stain without causing damage, however, please understand that generally it may damage the painted surface.

*Plastic and wood also varies hardness. Please make sure to take the measure of each material property and apply the cleaning work as necessary.

Environmentally Friendly, Clean With No Damage

Powerful Cleaning

With baking soda + water + compressed air

Baking soda media is water-soluble.

In the past, blasting carburetor and engine parts has been plagued by residue removal. As baking soda dissolves in water, it is easy to remove media after work.

Baking soda media is low Mohs' hardness.

It doesn't scrape plated surfaces, aluminum parts, and brass parts off too much. It can be cleaned gently and restored to as condition close to the original state.

Product Outline

Product name: EZ40-SX
Dimension:
Approximately 80.5 x 42 x 34 cm
Body weight:
Approximately 13kg
Air pressure range: 35-90PSI
Air consumption:
8.5CFM@90PSI (0.26 m³ /min)
Air injection port:
G1/4" Tank capacity: 18L(40lb)

Product name: Wet upgrade kit
Dimension:
Approximately 14 x 3.3 x 4.2 cm
Body weight: Approximately 0.3 kg
Air pressure range: 35-90PSI

Media consumption
330g/1 min
Water consumption(approximate)
4l/1 min

Upgrade Kit

EZ Booster Kit

Upgrade kit for EZ40-SX (sold separately)

We guarantee safety of media ejection, reduction of media consumption, efficiency of the operation and quality of the finish.

Product name: EZ booster kit
Dimension:
Approximately 23 x 18.6 x 8 cm
Body weight: Approximately 1.5 kg

Required environment

Air supply: air pressure 35-90PSI, air compressor with minimum 3 horsepower is recommended (effects to duration)

Water supply: faucet 2.0- 3.5Kgf/cm² pressure is recommended

EZ-GEAR

EZB-OverAll

Waterproof jumpsuit that can be worn on top of workwear. freesize

We discourage to use other blast media than recommended media which may cause troubles.

About EZ Blust

EZ-Blust™

Powered By Magic Powder.

"EZ Blust" is a trademark that combines the word "Easy", "Blue" inspired by the image of earth and "Blast" inspired from the cleaning, scraping & polishing action. Our mission is to provide products that are environmentally friendly, harmless and efficient for our customers around the world.

"EZ Blust" uses baking soda as a main raw material within what we call "magic powder", which has been used in our blasting method over the course 50 years.

It is an environmentally friendly method in which we use today and will continue to use well into the future. It is safe, harmless, and more cost effective compare to the traditional method.
